EXECUTIVE SUMMARY

Since 2002, KID has released an annual report detailing the U.S. Consumer Product Safety Commission (CPSC)'s children's product recalls throughout the previous year.

This year's report examines children's product recalls in 2021.

Main findings of this report include:

- Children's product recalls continue a downward trend since 2010. **The number of recalls this year (62) is not significantly lower than last year (63) but is lower than most years KID has collected data.** The only other years that have had lower number of recalls were 2018 (53) and 2019 (58).
- **An adult magnet set, Zen Magnets and Neoballs Magnets, accounted for the most units recalled with 10 million units recalled.** Prior to recall there were **two injuries and one death** associated with this product.
- The number of nursery product recalls decreased in 2021 (14) compared to 2020 (16), but nursery products were associated with the most deaths. **The Boppy Newborn Loungers and Fisher-Price Rock 'n Glide Soothers together led to 12 deaths prior to recall.**
- **Social media usage by the CPSC and recalling companies to alert consumers about recalled products has remained low.** The CPSC posted 50% of children's product recalls on Facebook, 40% on Twitter, and only 5% on Instagram. Recalling companies' posted only 44% of recalls were on Facebook, 32% on Twitter, and 22% on Instagram.
- **Deaths, injuries, and incidents reported prior to the recall has increased tremendously since last year.** In 2021, there were 14 deaths, 136 injuries, and 6,058 incidents prior recall, compared to 2020 in which there were no deaths, nine injuries, and 704 incidents.
- **The CPSC's monthly progress reports on how companies are undertaking recalls continue to be lackluster.** KID filed 63 Freedom of Information Act (FOIA) requests for recalls in 2020 and received very little data to analyze. Very few reports were fully completed (6) and available to the public and even this available data was incomplete and unreliable.

KID

Recommendations

- The CPSC and recalling companies need to prioritize recall effectiveness. Every recall should be posted on social media to increase recall effectiveness in addition to other measures to increase the likelihood recalled products are removed from use.
- The CPSC should recall all inclined sleep products still on the market or in homes, and policymakers should ban these inherently unsafe products to prevent more deaths.
- Policymakers and the CPSC should ban small, high-powered magnets which continue to be recalled due to ingestion hazard.
- The CPSC should improve its capabilities to provide recall effectiveness data both through the FOIA process and by making recall effectiveness metrics public.
- Congress should provide adequate funding for the CPSC to fulfill its mission.
- Parents and caregivers should subscribe to KID's newsletter at kidsindanger.org to receive a monthly recall digest listing all the children's products recalled that month.
- Parents and caregivers should report product incidents to the CPSC at SaferProducts.gov.

About Us

Kids In Danger (KID) is a nonprofit organization dedicated to protecting children by fighting for product safety. KID was founded in 1998 by Linda Ginzel and Boaz Keysar after the death of their 16-month-old son, Danny, in a dangerous recalled portable crib. KID's mission is to save lives by enhancing transparency and accountability through safer product development, better education and stronger advocacy for children.

This report looks at data collected by the Consumer Product Safety Commission (CPSC). Congress created the CPSC in 1972 through the Consumer Product Safety Act (CPSA). This legislation directed the CPSC to protect the public "against unreasonable risks of injuries associated with consumer products." The CPSC has jurisdiction over more than 15,000 types of consumer products and is charged with protecting consumers from products that pose choking, fire, electrical, chemical, or mechanical hazards or others that can injure children. In 2008, Congress passed the Consumer Product Safety Improvement Act (CPSIA). This law, which includes a section named for KID's founders' son Danny Keysar, requires standards for juvenile products, limits lead and other harmful substances, and mandates independent testing for most children's products.

Introduction

KID's annual recall report examines data and trends in children's products that have been recalled by the CPSC. This year's report examines children's product recalls during the 2021 calendar year. Product recalls can begin in a variety of ways. For example, a recall can start with the report of an incident or injury to the CPSC by a consumer, the report of an unsafe product to the CPSC by the manufacturer of the product, or media coverage of a potentially dangerous product. If an injury or incident was reported, the CPSC uses this information to help decide if a product should be recalled, considering the severity of the incident or injury and how likely it is to reoccur [1]. Once their product is recalled, all manufacturers are required to implement a Corrective Action Plan. A Corrective Action Plan includes any remedial actions taken to mitigate the potential hazard, as well as changes to design, manufacturing, materials, quality control, warnings, marketing, or discontinuing the product [2].

Due to the COVID-19 pandemic, the CPSC issued a warning on its website throughout 2021 (see image below) stating that some remedies stated in recall press releases may not be available and consumers should contact the recalling company for more details. KID does not know how the pandemic has affected the announcing of recalls or corrective action plans since that information is held secretly at the CPSC until the recall is announced.

General Recall Trends

In 2021, there were 219 recalls issued by the CPSC, of which 62 (28%) were children's products. The number of recalled units of children's products in 2021 was 19,067,488. Major contributors include Zen Magnets and Neoballs Magnets (10,000,000 units), Removable Foam Facial Interfaces for Oculus Quest 2 Virtual Reality Headsets (4,000,000 units), and Boppy Original Newborn Loungers, Boppy Preferred Newborn Loungers and Pottery Barn Kids Boppy Newborn Loungers (3,300,000 units).

Table 1: Recalls Per Year

Year	Total Recalls	Children's Product Recalls	% of Total Recalls	Units of Children's Products
2021	219	62	28%	19,067,488
2020	256	63	25%	8,790,880
2019	241	58	24%	13,782,325
2018	258	52	20%	2,312,750
2017	280	93	33%	11,854,605
2016	332	76	23%	66,813,956
2015	288	68	24%	5,501,952
2014	296	75	25%	16,825,696
2013	293	114	39%	11,189,462
2012	346	97	28%	13,039,818
2011	310	121	39%	11,627,576
2010	355	160	45%	44,492,577
2009	346	143	41%	21,124,551
Average	294	91	30%	18,955,664

Figure 1: Children's Product Recalls Continue on Downward Trend Since 2010

Figure 2: Units Recalled Increasing since 2018

In many cases, manufacturers will work with the CPSC and opt-in to the Fast Track Product Recall Program, which expedites the recall process. This benefits the business recalling their products as the CPSC will forgo the investigation into the reported defect and will not determine what level of hazard it poses [3]. Participation in Fast-Track is optional for companies and avoids extensive review and assessment. The number of children's products recalled through the Fast-Track program decreased slightly in 2021 (37%) compared to 2020 (40%). Due to the secrecy surrounding how the CPSC and companies come to a recall decision, it is hard to know the impact of Fast Track on consumer safety.

Figure 3: Percentage of Fast-Tracked Recalls Decrease

[3] U.S. Consumer Product Safety Commission Office Of Compliance & Field Operations, 2021, p. 15

Deaths Reported Prior to Recall Second Highest in Last 10 Years

In 2021, there were 14 deaths reported before a product was recalled. This is the second highest number of deaths reported

Figure 4: Increase in Deaths Reported Prior to Recall in 2021

prior to recall in the last ten years. The highest was 38 deaths in 2019, 37 of which were associated with the Fisher-Price Rock ‘n Play and the Kids II Rocking Sleeper. It is important to note that the deaths, injuries and incidents recorded here are not representative of all deaths, injuries and incidents due to recalled products and more can occur after the recall has been announced. In fact, after the 2019 recall of the Fisher-Price Rock ‘n Play, the company did little to reacquire the sleepers, and eight more deaths occurred after the recall [4]. Like 2019, in 2021 nursery products were also associated with most of the deaths reported prior to recall. The Boppy Original Newborn Loungers, Boppy Preferred Newborn Loungers and Pottery Barn Kids Boppy Newborn Loungers were responsible for eight deaths prior to recall while Fisher-Price 4-in-1 Rock ‘n Glide Soothers and 2-in-1 Soothe ‘n Play Gliders were responsible for four deaths prior to recall. Additionally, one death was associated with the Zen Magnets and Neoballs Magnets and another with Angel Line Bunk Beds with Angled Ladders.

[4] Felton, Ryan. “At Least 8 Infant Deaths Linked To Fisher-Price Rock ‘N Play Sleepers Occurred After The Product Was Recalled”. Consumer Reports, 2022, <https://www.consumerreports.org/baby-product-recalls/deaths-linked-to-fisher-price-rock-n-play-after-recall-a1183945428/>.

Injuries Reported Prior to Recall Increase

Twelve of the children's products recalled in 2021 were responsible for 136 reported injuries prior to recall. This is an increase in the number of injuries compared to 2020, where there were nine reported injuries. The Removable Foam Facial Interfaces for Oculus Quest 2 Virtual Reality Headsets had 45 injuries reported and was recalled for skin irritations. This product was intended for general use by people of all ages, but due to the high number of children that used and got injured by this product, it was included in this report. The UPPAbaby adapters included with Rumbleseats caused 79 injuries.

Figure 5: Facebook Technologies Removable Foam Facial Interfaces for Oculus Quest 2 Virtual Reality Headsets

Figure 6: UPPAbaby adapters included with Rumbleseats

Figure 7: Number of Injuries Before Recall Increasing

Incidents Reported Prior to Recall Highest in the Past 10 Years

In 2021, 6,058 incidents were reported prior to recall, with the average number of incidents per product being 97.7. In 2020, 704 incidents were reported, and the average number of incidents per product was 11.2. Two products had over 100 incidents before being recalled. The Removable Foam Facial Interfaces for Oculus Quest 2 Virtual Reality Headsets had 5,716 incidents reported. The product was recalled due to skin irritation from the foam facial interfaces. This product was intended for general use by people of all ages, but due to the high number of children that used and were involved in incidents pertaining to this product, it was included in this report. The UPPAbaby adapters included with Rumbleseats had 135 incidents reported. The product was recalled due to fall and injury hazard.

Figure 8: Number of Incidents Before Recall Increasing

Recalls by Product Category

Figure 11 shows the breakdown of the 62 children's product recalls by category. Clothing (16 recalls) was the top category, consisting of 26% of all children's product recalls. This is a jump from 2020 when only nine clothing products were recalled. Nine of the 16 clothing products recalled were sleepwear products, which were recalled due to flammability or choking hazard. However, furniture and toy recalls decreased from 14 and 12 recalls in 2020 to eight and seven recalls respectively this year.

Nursery recalls (14) were high and spanned a large variety of product type and hazard concerns. Adult magnet set, Zen Magnets and Neoballs Magnets, had the highest number of units recalled, accounting for 10 million units. The Removable Foam Facial Interfaces of the electronic toys Oculus Quest 2 Virtual Reality Headset was the second highest with 4 million units recalled. Both the Magnet sets and the Oculus headsets were intended for general use by people of all ages, but children tended use them the most, so both products were included in our report.

Figure 9: Hanna Andersson Baby Long Sleeve Wiggle Sets

Figure 10: La Paloma Girls' Nightgowns

Figure 11: Clothing Products are Top Recall Category and Outdoor Recalls Continue to Rise

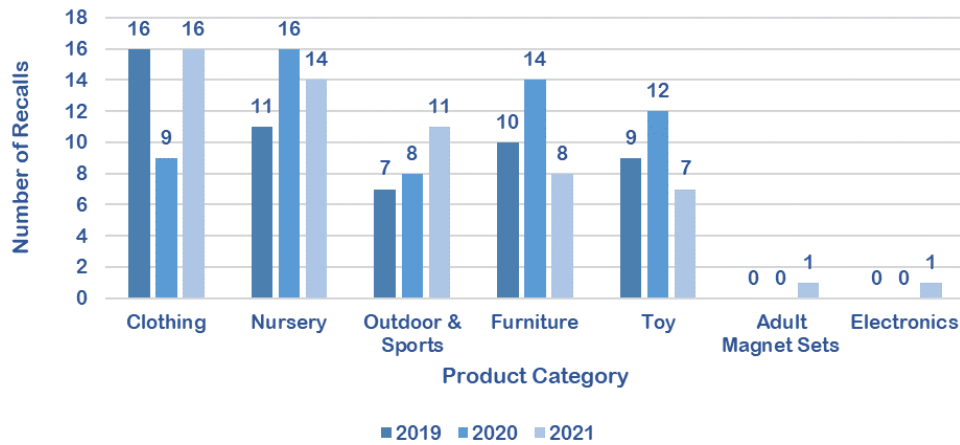

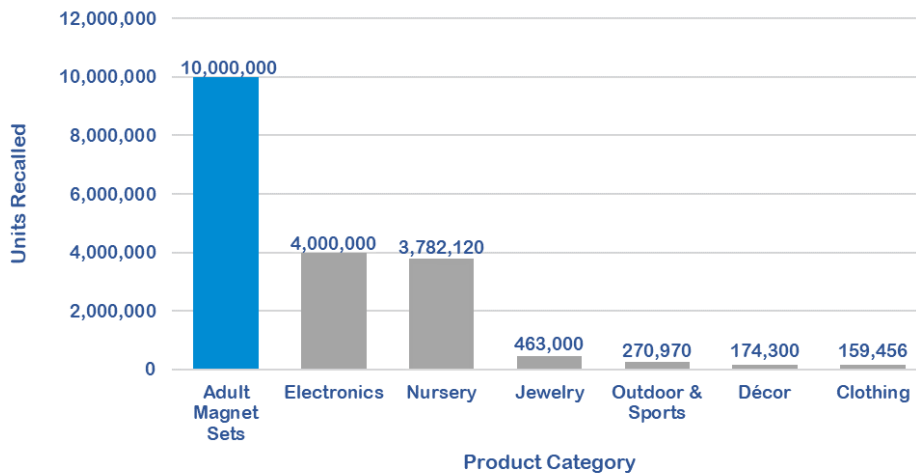

Figure 12: Adult Magnet Sets Accounts for 52% of all Units Recalled

Nursery Products

The number of nursery product recalls decreased slightly in 2021 (14) compared to 2020 (16), but they led to the most deaths. The Boppy Newborn Loungers and Fisher-Price Rock ‘n Glide Soothers together led to 12 deaths prior to recall. Just two years ago, 37 deaths were associated with the nursery products Fisher-Price Rock ‘n Play and the Kids II Rocking Sleeper. These products were used in unsafe sleep practices for newborn and infants. Even with close supervision, allowing for a child to sleep in a product not safely developed or intended for sleep creates an increased risk for injury or death. In 2021, the inclined sleeper accessory included with Kolcraft Cuddle ‘N Care 2-In-1 Bassinet & Incline Sleepers and Preferred Position 2-In-1 Bassinet & Incline Sleepers was recalled due to suffocation risk

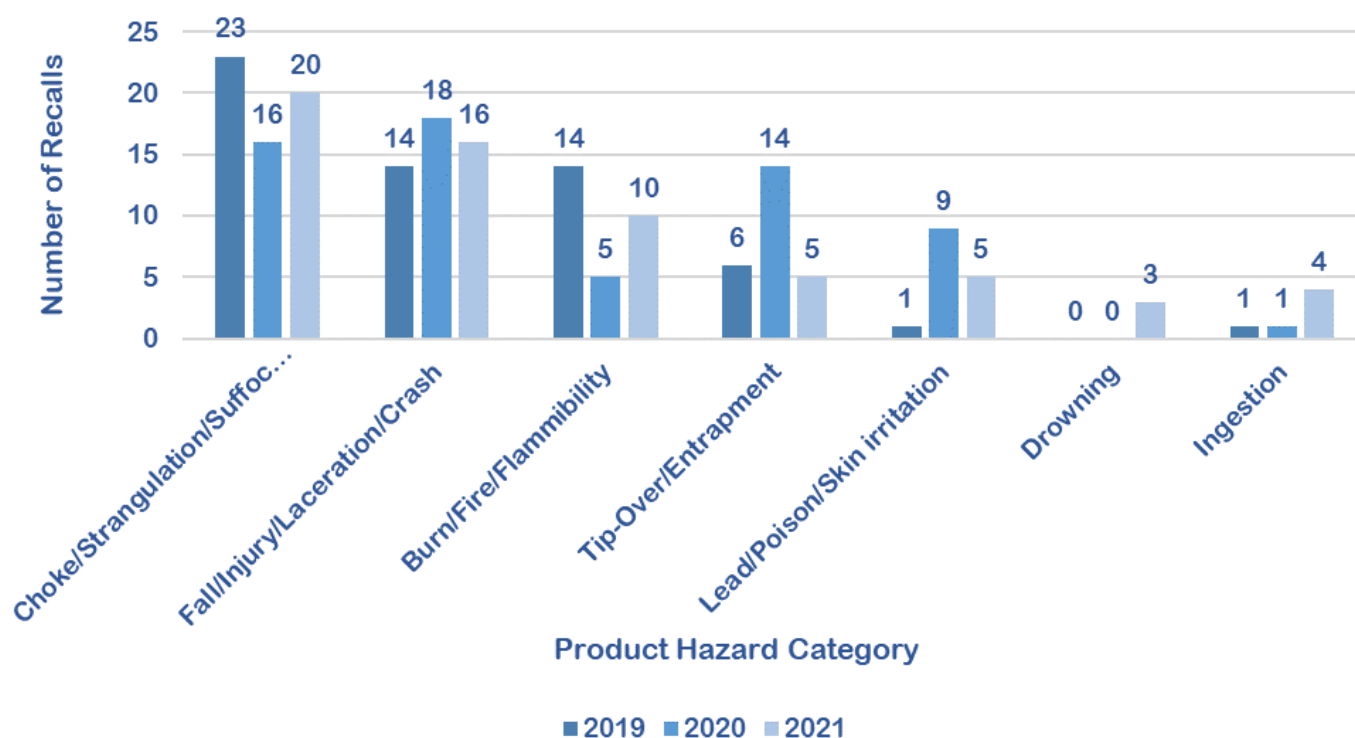

Figure 13: Boppy Loungers

Figure 14: Fisher-Price 4-in-1 Rock 'n Glide Soothers

Recalls by Hazard

Figure 15: Recalls for Choking Remain High; Drowning and Ingestion Increasing

Ingestion Hazards

While there were only four recalls for ingestion hazard, one of these products, Zen Magnets and Neoballs Magnets, accounted for 10,000,000 units, and led to two injuries and one death prior to recall. However, it is not possible to identify the brand of magnet ingested when a patient goes to the emergency room, so these numbers could be higher. When ingested, small, high-powered magnets can attract each other and become lodged in the digestive system. This can result in perforations, twisting and/or blockage of the intestines, infection, blood poisoning, and even death. From 2009 to 2018, there was an estimated 4,500 magnet-related cases treated in U.S. hospital emergency departments for ingestions of magnets most by children 11 months to 16 years old [5].

This product was intended for adults, but small magnets are attractive to children and pose a risk to them despite the intent. Advertisements for high-powered magnets can be confusing, and even misleading. Some manufacturers describe high-powered magnet sets as toys, but these are products designed for adults, and do not have to meet the same safety standards as children's toys.

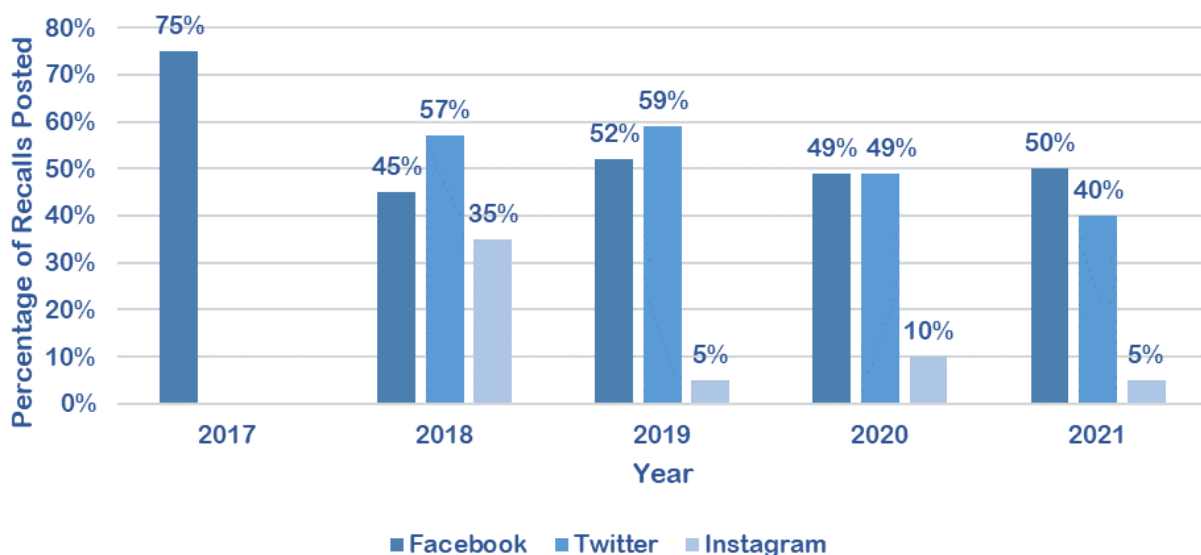

Figure 16: Zen Magnets and Neoballs Magnets

[5] "Ingestion Of High-Powered Magnetic Balls And Magnetic Cubes Poses Serious Risk Of Severe Internal Injury Or Death In Children And Teens". CPSC.Gov, 2021, <https://www.cpsc.gov/Newsroom/News-Releases/2021/Ingestion-of-High-Powered-Magnetic-Balls-and-Magnetic-Cubes-Poses-Serious-Risk-of-Severe-Internal-Injury-or-Death-in-Children-and-Teens>.

CPSC Falls Behind on Announcing Recalls on Social Media

Social media is a powerful tool for disseminating information and can be more readily used in communicating children's product recalls. Over the years, KID has monitored the percentage of children's product recalls that the CPSC posted to their social media pages and announcements stay consistently low. Facebook data has been tracked since 2017 while Instagram and Twitter data has been tracked since 2018. Facebook has seen a relatively consistent percentage of posting over the years hovering around 45-50% of recalls posted. In 2021, CPSC posted 50% of the children's products recalled to their Facebook. There has been a slight decrease in Twitter usage, with only 40% of recalls posted in 2021 (down from 49% in 2020). CPSC's use of Instagram to announce recalls decreased from 10% to 5% from 2020 to 2021 and remains very low since 2018. KID checks for recalls on Instagram posts, not stories. CPSC's Instagram reliance on stories may reach more people at the time of recall, but the stories are removed after 24 hours not allowing followers to see the recall after the initial posting. The CPSC is failing to take advantage of an opportunity to reach parents and caregivers of young children who are active on social media.

Figure 17: CPSC Social Media Usage for Recalls Remains Low

Companies Need to Use Social Media to Disseminate Recall Information

Since 2014, KID has tracked recalling companies using social media to announce recalls. In 2021, companies posted 44% of recalls on Facebook, 32% on Twitter, and 22% on Instagram. Social media usage by companies has remained relatively consistent since 2019. Over the past three years, not even half of recalls have been posted on any social media platform by manufacturers. KID tracks Instagram posts, not stories as stories do not allow consumers to see the recall after the 24-hour window is up for Instagram stories. Similar to the CPSC, companies have the power to disseminate information about recalled products by posting them on social media. Recall effectiveness can be amplified if recalling companies adequately notify their customers about recalls.

Figure 18: Companies' Use of Social Media to Announce Recalls Remains Low

Products For Adults, But Dangerous to Children

Every year, products meant for use by adults get recalled for posing a threat to children. These recalls are typically products that are poisonous when ingested, such as medication or essential oils. The Poison Prevention Packaging Act requires these types of products to have child-proof packaging, and most recalls happen when a product fails to meet this standard. KID tracks these recalls to warn consumers but does not include them in data calculations for the annual recall report. In 2021, 17 products for adults were recalled due to a potential danger to children. A list of these products is in Appendix B.

Two products were associated with a high number of deaths and injuries to children in 2021. The Peloton Tread+ Treadmills could pull small objects, pets, and children under it and was associated with 29 injuries to children and the death of a six-year-old. Walmart's Better Homes and Gardens Essential Oil Infused Aromatherapy Room Spray with Gemstones had a rare bacterial contamination causing melioidosis in four patients and resulted in two deaths, including a child.

Figure 19: Peloton Tread+ Treadmills

Figure 20: Walmart Better Homes and Gardens Essential Oil Infused Aromatherapy Room Spray with Gemstones

Recall Effectiveness

After a product is recalled, CPSC protocol dictates that manufacturers submit Corrective Action Plan (CAP) Monthly Reports to track the recall process. For the year 2020, there were 63 total children's product recalls, and KID submitted Freedom of Information Act (FOIA) requests to the CPSC to receive the data that these companies have submitted. However, out of the 63 requests, KID only received six reports with a full nine or more months of data. Within the six reports, most companies' rate of correction remained low. Most companies did not correct the majority of units from consumers, with only one company, Serena & Lily, correcting 80% of the units that were with consumers.

Furthermore, the data provided in the reports was unreliable and many of the reports looked to be filled out incorrectly. *For example, the Infantino Go Forward 4-in-1 Evolved Ergonomic Carrier, Flip Front report indicated that there were zero number of units with consumers at the time of the recall, but also indicated that 581 units with consumers were corrected through the recall process. The reporting of the recall participation was inconsistent and the companies did not seem to have uniform rules as to how to report the data or how to categorize their recall numbers. This makes it difficult to analyze the recall effectiveness even when data was available.

Figure 21: Serena & Lily Nash Convertible Cribs

Figure 22: Infantino Go Forward 4-in-1 Evolved Ergonomic, Flip Front2back and Up Close Newborn Infant Carriers

Table 2: Units Corrected in Full Reports Remain Low

Product	Total Number of Units Recalled	Number of Units Corrected	Total Percent Corrected	Recalled Units with Consumers	Number of Units with Consumers Corrected	Percent of Units with Consumers Corrected
Transform Essential Home Belmont 2.0 Four Drawer Chests	19,846	113	1%	19,677	0	0%
Joybird Blythe Dresser	96	11	11%	94	11	12%
Cub Scout Outdoor Activity Pin	78,291	11,265	14%	68,808	1,782	3%
Crate and Barrel Parke Twin and Full Beds	2,439	1,252	51%	1,398	211	15%
Infantino Go Forward 4-in-1 Evolved Ergonomic Carrier, Flip Front	30,317	17,151	57%	NA*	581	NA*
Serena & Lily Nash Convertible Cribs	260	209	80%	257	206	80%

Eleven more reports were provided but contained partial information and one report file returned an error when downloaded. The rest of the requests (45) were denied due to FOIA exemption (8), were denied due to records not existing (17), have been processing for many months (2), or have not been addressed (18).

Figure 23: Status Of CAP Progress Reports For 2020 Recalls

CPSC's failure to locate and provide data for these products suggest that companies did not complete the required forms, or that the CPSC does not actually require a report to confirm compliance with the recall. This may reveal a failure by the CPSC to keep these companies accountable. The lack of data also reveals inefficiencies in the CPSC's FOIA request system and a lack of transparency to the consumers. For more information on specific reports, see Appendix C.

Conclusion and Recommendations

This report shows the product safety system has a long way to go to ensure the safety of our most vulnerable consumers—children. The extremely high number of deaths, injuries, and incidents prior to recall is a reminder that products must be recalled effectively and with urgency. More can be done by companies and the CPSC to use all tools in their arsenal to get recalled products out of homes – especially social media. The difficulty in assessing the effectiveness of recalls means that many dangerous recalled products remain in homes and childcare facilities, and can still cause injury or death.

KID recommends the following:

- The CPSC and recalling companies need to prioritize recall effectiveness. Every recall should be posted on social media to increase recall effectiveness in addition to other measures to increase the likelihood recalled products are removed from use. KID tracks Instagram posts, not stories, and while the CPSC and recalling companies may post recalls as stories, it would be more effective to also announce them as posts so they will be on their pages longer than 24 hours.
- The CPSC should recall all inclined sleep products still on the market or in homes, and policymakers should ban these inherently unsafe products to prevent more deaths.
- Policymakers and the CPSC should ban small, high-powered magnets which continue to be recalled due to ingestion hazard.
- The CPSC should improve its capabilities to provide recall effectiveness data both through the FOIA process and by making recall effectiveness metrics public.
- Congress should provide adequate funding for the CPSC to fulfill its mission.
- Parents and caregivers should subscribe to KID's newsletter at kidsindanger.org to receive a monthly recall digest listing all the children's products recalled that month.
- Parents and caregivers should report product incidents to the CPSC at SaferProducts.gov.

Methodology

A children's product is defined as any product designed or intended for the care of or use by children under age 14. KID has expanded this definition to include other products that pose risks specifically to children such as window blinds (none recalled this year) and dressers. Children's products were further categorized for this report by the type of product (clothing, furniture, kitchenware, nursery, outdoor & sports, and toys). More details on the products can be found in Appendix A.

Since 2014, KID has monitored the social media usage by manufacturers to report recalled products. When a product is recalled, KID checks if the recalling company has a Facebook, Twitter and/or Instagram page. If the manufacturer has any of these three social media platforms, it is noted for each applicable platform whether a recalled item was posted. KID has also monitored the usage of social media by the CPSC since 2017 when the CPSC joined Facebook. The CPSC's Twitter and Instagram pages have been monitored for recalled children's product posts since 2018. KID monitors Instagram posts, not stories.

KID obtained all recall information for this report from press releases issued jointly by product manufacturers and the CPSC. Press releases outline the incidents, injuries, deaths, and failures caused by the product prior the date of recall. All numbers, facts, and figures contained in this report originated in these press releases. Recall effectiveness data was obtained by submitting FOIA requests to the CPSC for monthly progress reports. Only children's products under the jurisdiction of the CPSC were considered. This excludes car seats and booster seats regulated by the National Highway Traffic Safety Administration. However, the CPSC does have oversight of car seats that also function as infant carriers.
