Executive Summary

Since 2002, KID has released an annual report detailing the U.S. Consumer Product Safety Commission (CPSC)'s children's product recalls from the previous year. This year's report examines children's product recalls in 2022.

The main findings of this report include:

- This year had the highest number of children's product recalls since 2013; 100 recalls making up 34% of all CPSC recalls.
- Recalls due to excessive lead content increased with 19 recalls. This is the highest number of lead recalls in the last 10 years, with nine recalls in the year 2020 a distant second.
- Clothing recalls doubled, with 32 recalls compared to 16 recalls in 2021. Most of these were due to a failure to meet federal flammability standards.
- The number of nursery product recalls decreased but the products continue to lead to deaths and injuries prior to recall. The Mockingbird Single-to-Double Strollers were associated with eight injuries due to fall hazard and the 4moms MamaRoo Baby Swing led to one injury and one death due to entanglement and strangulation hazards.
- Social media usage by the CPSC and recalling companies to alert consumers about recalled products remained low. The CPSC posted 42% of children's product recalls on Facebook and 47% on Twitter. However, the CPSC's use of Instagram increased to 34%, compared to 5% in 2021, as they started posting the recalls as story highlights.
- The CPSC released warnings to consumers about five hazardous children's products without recalling the products. The warnings were for the BabyRescue Rapid Evacuation Devices, Fisher-Price Infant-to-Toddler Rockers, Fisher-Price Newborn-to-Toddler Rockers, Kids2 Rockers, and the DockATot Deluxe Plus Dock.
- Companies' monthly progress reports regarding recall activity continue to be sporadically and incompletely filled. KID filed 64 Freedom of Information Act (FOIA) requests for recalls in 2021 and received only 38 reports, many with missing or incorrect data.

KID recommends the following:

- Recalling companies must use all tools at their disposal to retrieve recalled products. This includes social media for every recall, and other measures such as direct notification of consumers and marketing recalls to the same extent as they market products.
- Recalling companies should work with retailers, marketers, consumer groups and state and local governments to spread information about the recall more widely and to reach more consumers.
- Online platforms should strengthen efforts to ensure all products sold on their sites are safe, meet any required standards and adequately warn consumers about product hazards.
- Product designers and manufacturers should create safe products that don't injure children. Resources such as the KID Design Safety Toolkit, CPSC's Small Business Ombudsman and services of associations such as the Juvenile Product Manufacturers Association and The Toy Association and many others are accessible to assist in this.
- The CPSC should continue to strengthen Corrective Action Plans and recall tracking to make recall efforts more robust.
- The CPSC should strengthen enforcement for online platforms and third-party sellers that are selling dangerous products online.
- The CPSC should continue to issue unilateral notifications to consumers about a hazardous product when the company does not agree to a recall and should do everything in its power to get unsafe products recalled.
- The CPSC should translate all children's product recalls into Spanish, with a priority on those involving injuries or deaths.
- The CPSC should improve its capabilities to provide accurate recall effectiveness data both through the FOIA process and by making recall effectiveness metrics public.
- Policymakers should provide adequate funding for the CPSC to fulfill its mission.
- Parents and caregivers should report product incidents to the CPSC at [SaferProducts.gov](https://www.saferproducts.gov).
- Parents and caregivers must be proactive to keep up with recalls. They can subscribe to KID's newsletter to receive a monthly recall digest at www.kidsindanger.org.

About Us

Kids In Danger (KID) is a nonprofit organization dedicated to protecting children by fighting for product safety. KID was founded in 1998 by Linda Ginzel and Boaz Keysar after the death of their 16-month-old son, Danny, in a dangerous, recalled portable crib. KID's mission is to save lives by enhancing transparency and accountability through safer product development, better education and stronger advocacy for children. This report looks at data collected by the Consumer Product Safety Commission (CPSC). Congress created the CPSC in 1972 through the Consumer Product Safety Act (CPSA). This legislation directed the CPSC to protect the public "against unreasonable risks of injuries associated with consumer products." The CPSC has jurisdiction over more than 15,000 types of consumer products and is charged with protecting consumers from products that pose choking, fire, electrical, chemical, or mechanical hazards or others that can injure children. In 2008, Congress passed the Consumer Product Safety Improvement Act (CPSIA). This law, which includes a section named for KID's founders' son Danny Keysar, requires standards for juvenile products, limits lead and other harmful substances, and mandates independent testing for most children's products.

Introduction

KID's annual recall report examines data and trends in children's products that have been recalled jointly by the CPSC and companies. This year's report examines children's product recalls in 2022. Product recalls can begin in a variety of ways. For example, a recall can start with the report of an incident or injury to the CPSC by a consumer, the report of an unsafe product to the CPSC by the manufacturer of the product, or media coverage of a potentially dangerous product. If an injury or incident was reported, the CPSC uses this information to help decide if a product should be recalled, considering the severity of the incident or injury and how likely it is to reoccur [1]. Once a product is recalled, the CPSC posts a recall release to its website. In 2022, none of the children's product recall releases on the CPSC webpage were translated into Spanish, and prior to 2022, Spanish translations were few and far between. Once their product is recalled, all manufacturers are required to implement a Corrective Action Plan. A Corrective Action Plan includes any remedial actions taken to mitigate the potential hazard, as well as changes to design, manufacturing, materials, quality control, warnings, marketing, or discontinuing the product [2].

General Recall Trends

In 2022, there were 293 recalls issued by the CPSC, of which 100 (34%) were children’s products. This is the highest number of recalled children’s products since 2013. The number of recalled units of children’s products was 5,566,299. The recall with the greatest number of units recalled was the 4moms MamaRoo Baby Swing and RockaRoo Baby Rockers (2,220,000 total units).

Table 1: Recalls Per Year

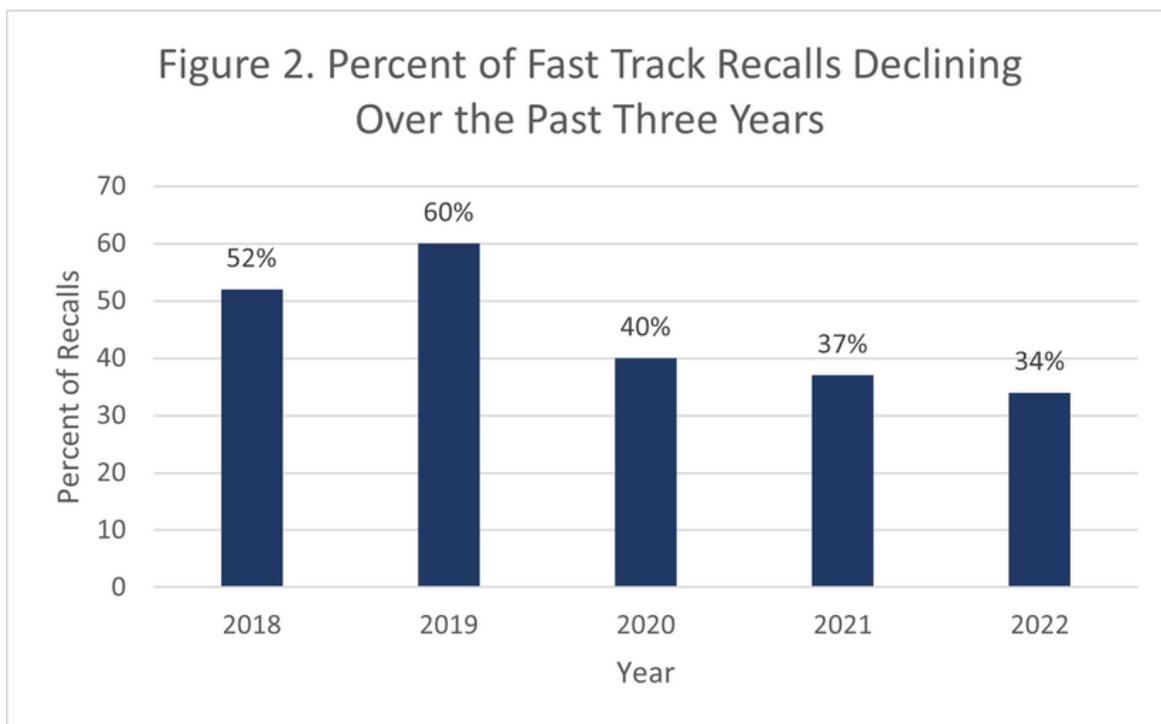

Year	Total Recalls	Children's Product Recalls	Percent of Total Recalls	Units of Children's Products
2022	293	100	34%	5,566,299
2021	219	62	28%	19,067,488
2020	256	63	25%	8,790,880
2019	241	58	24%	13,782,325
2018	258	52	20%	2,312,750
2017	280	93	33%	11,854,605
2016	332	76	23%	66,813,956
2015	288	68	24%	5,501,952
2014	296	75	25%	16,825,696
2013	293	114	39%	11,189,462
2012	346	97	28%	13,039,818
Average	282	78	28%	15,885,930

Figure 1. Number of Children's Products Recalls Increased

In many cases, manufacturers will work with the CPSC and opt-in to the Fast Track Product Recall Program, which expedites the recall process. This benefits the business recalling their products as the CPSC will forgo the investigation into the reported defect and will not determine what level of hazard it poses.

Participation in Fast Track is optional for companies and avoids extensive review and assessment. The number of children’s products recalled through the Fast Track program continues to decrease since 2019 (60%) compared to 2022 (34%). Due to the secrecy surrounding how the CPSC and companies come to a recall decision, it is hard to know the impact of Fast Track on consumer safety.

Deaths Reported Prior to Recall

In 2022, there were four deaths reported before a product was recalled. This was a decrease compared to the previous year during which there were 14 deaths prior to recall. Two of these deaths were associated with the Pillowfort Weighted Blankets; children can be asphyxiated if they unzip and climb into the blanket. The 4moms MamaRoo Baby Swing led to one death when a child was strangled by the restraint straps that dangled below the swing seat. The fourth death was associated with the Goalsetter Wall-Mounted Basketball Goals which can detach and fall.

Goals

Figure 6. Decrease in Deaths Reported
Prior to Recall

Injuries Reported Prior to Recall

Nine of the children's products recalled were responsible for 47 reported injuries prior to recall. This is a decrease in injuries compared to 2021, in which there were 136 injuries reported prior to recall. The Huffy Corporation Blue's Clues Foot to Floor Ride-on Toys caused the most injuries, with 18 reported injuries. The Pacific Igniter and Pacific Bubble Pop 20" Kids' Bicycles were responsible 10 injuries. The Mockingbird Single-to-Double Strollers caused eight injuries, while the HD Premier DigitDots Magnetic Balls led to four injuries. The Goalsetter Wall-Mounted Basketball Goals and Stokke Clikk High Chairs were each responsible for two injuries before recall. Lastly, the UPPAbaby All-Terrain RIDGE Jogging Strollers, the 4moms MamaRoo Baby Swing, and Konges Sløjd Baby Mirror Activity Toys each led to one injury before recall.

Figure 9. (Right) The Pacific
Igniter and Pacific Bubble
Pop 20" Kids' Bicycles

Incidents Reported Prior to Recall

In 2022, 867 incidents were reported prior to recall, with the average number of incidents per product being 16. Both the total number of incidents and the average number of incidents per product decreased significantly from 2021. In 2021, 6,058 incidents were reported, and the average number of incidents per product was 98. However, this was primarily due to one product, the Oculus Quest 2 Virtual Reality Headsets, that had 5,716 incidents reported prior to recall in 2021. Three products had over 100 incidents before being recalled. The Valco Baby Snap Duo Trend Strollers had 207 incidents, the Monti Kids Wooden Push Toys had 145 incidents, and the Mockingbird Single-to-Double Strollers had 138 incidents.

Recalls by Categories

Toy recalls were the top category in 2022 with 33 recalls, closely followed by clothing product recalls with 32 recalls. Hazards ranged from injury and entrapment to violation of federal lead content standards. Furniture recalls decreased over the past four years. Alternatively, outdoor and sports recalls have gradually increased over the past four years with 13 recalls in 2022.

The actual number of injuries and deaths associated with recalled items can be difficult to accurately account for because parents and caregivers might not know to associate the product with the incidents. With such large numbers of recalled units, many of them may not be reacquired and still pose a danger to consumers.

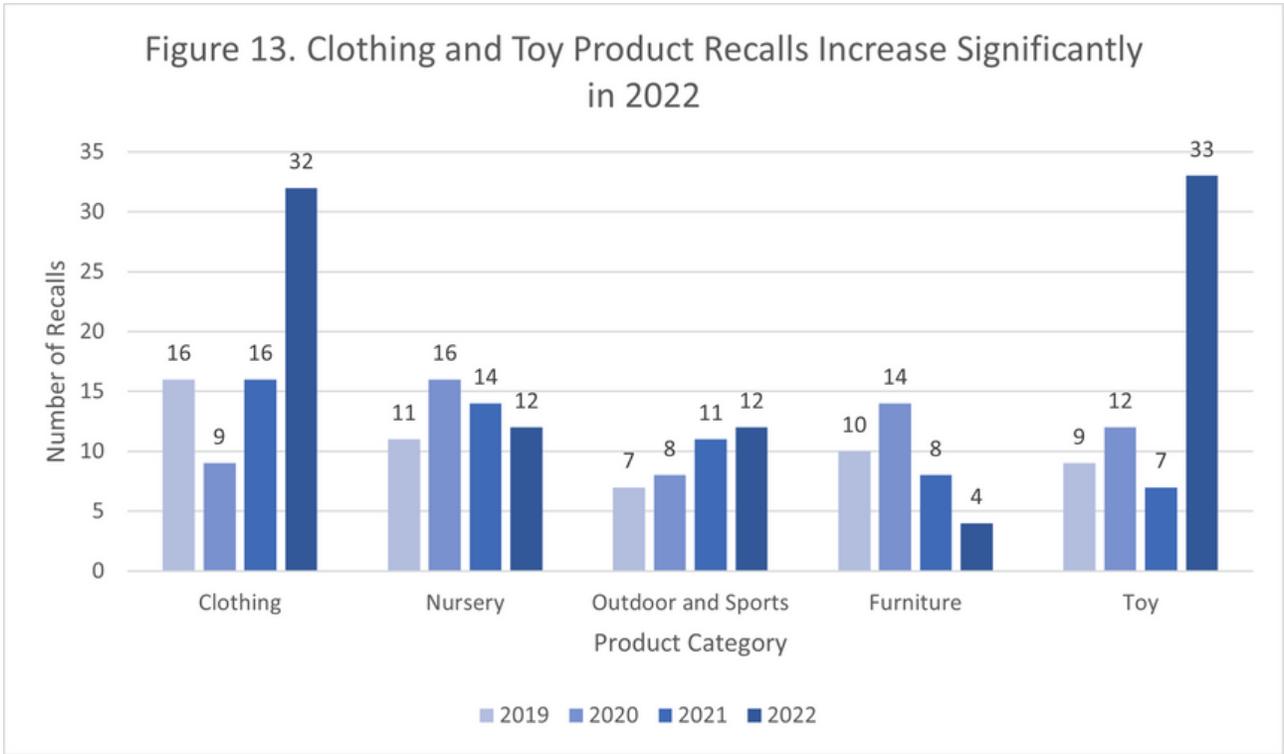

Table 2: Recalls by Category

Category	Number of Recalls
Toy	33
Clothing	32
Outdoor and Sports	12
Nursery	12
Household	5
Furniture	4
Misc.	2

Increase in Clothing Recalls

Clothing recalls were at a high since 2013 when there were 31 clothing products recalled. Out of the 32 clothing recalls in 2022, 22 were due to failure to meet federal flammability standards, posing a risk of burn injuries to children. Five other clothing recalls were due to violation of federal lead content ban, four were due to choking/strangulation hazards, and one was due to a laceration hazard.

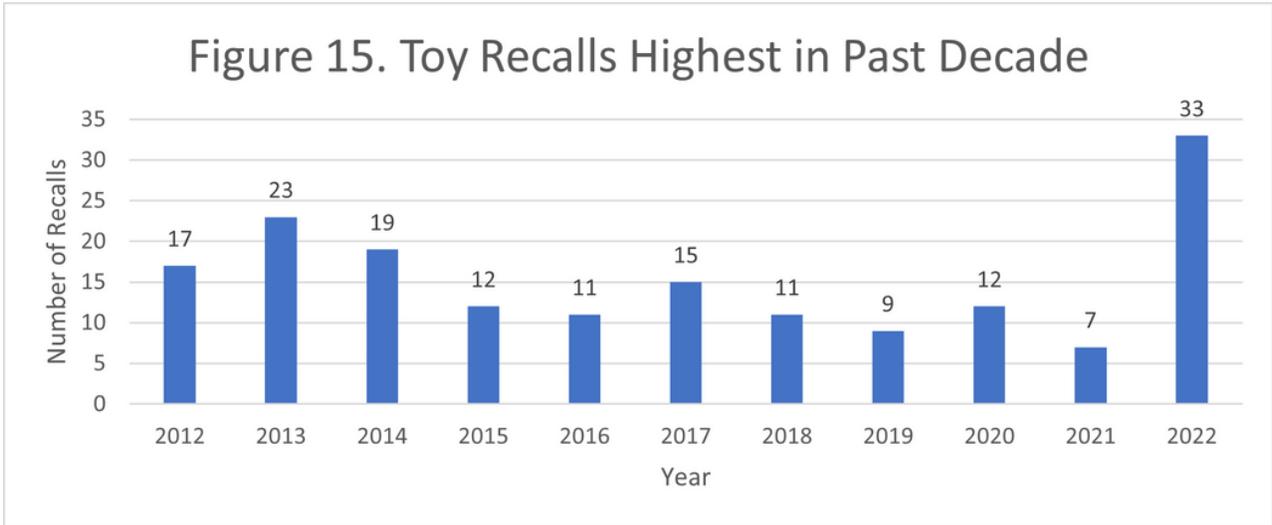

These flammable clothing products are commonly sold by third-party sellers on online shopping sites. With their ease and accessibility consumers may purchase these products with little knowledge of their violation of longstanding standards. The Flammable Fabrics Act, the law under which the CPSC created federal flammability standards, has been in place since 1953.

Toy Recalls

Toy recalls increased significantly with 33 recalls. This was the highest number of toy recalls in the past decade. Most of these recalls were due to small parts coming loose that caused a choking hazard or due to violation of the federal lead content ban.

Figure 15. Toy Recalls Highest in Past Decade

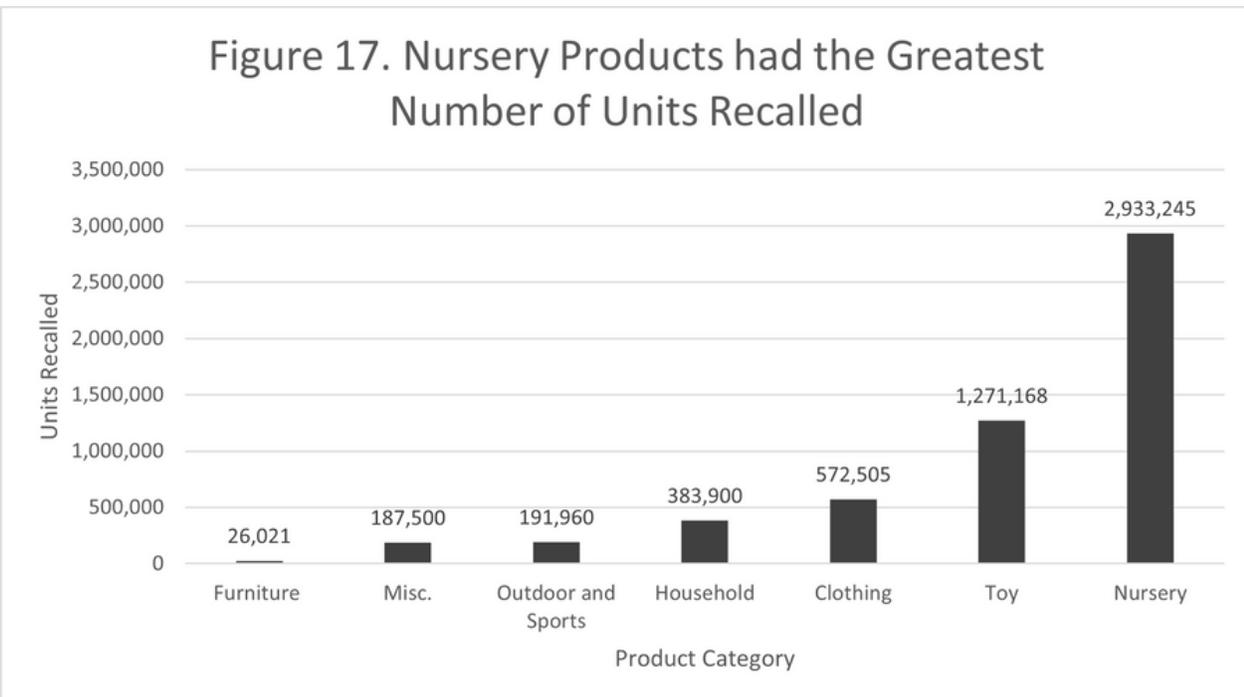

Nursery Products

The number of nursery product recalls decreased compared to the previous four years, but remain a problem since they have led to child injuries and deaths. The Mockingbird Single-to-Double Strollers were associated with eight injuries due to fall hazards and the 4moms MamaRoo Baby Swing was associated with one injury and one death due to entanglement and strangulation hazards. Nursery products accounted for the greatest number of units recalled with 2,933,245,000 units or 52% of all units. The 4moms MamaRoo Baby Swing accounted for the most units recalled with 2,220,000 units.

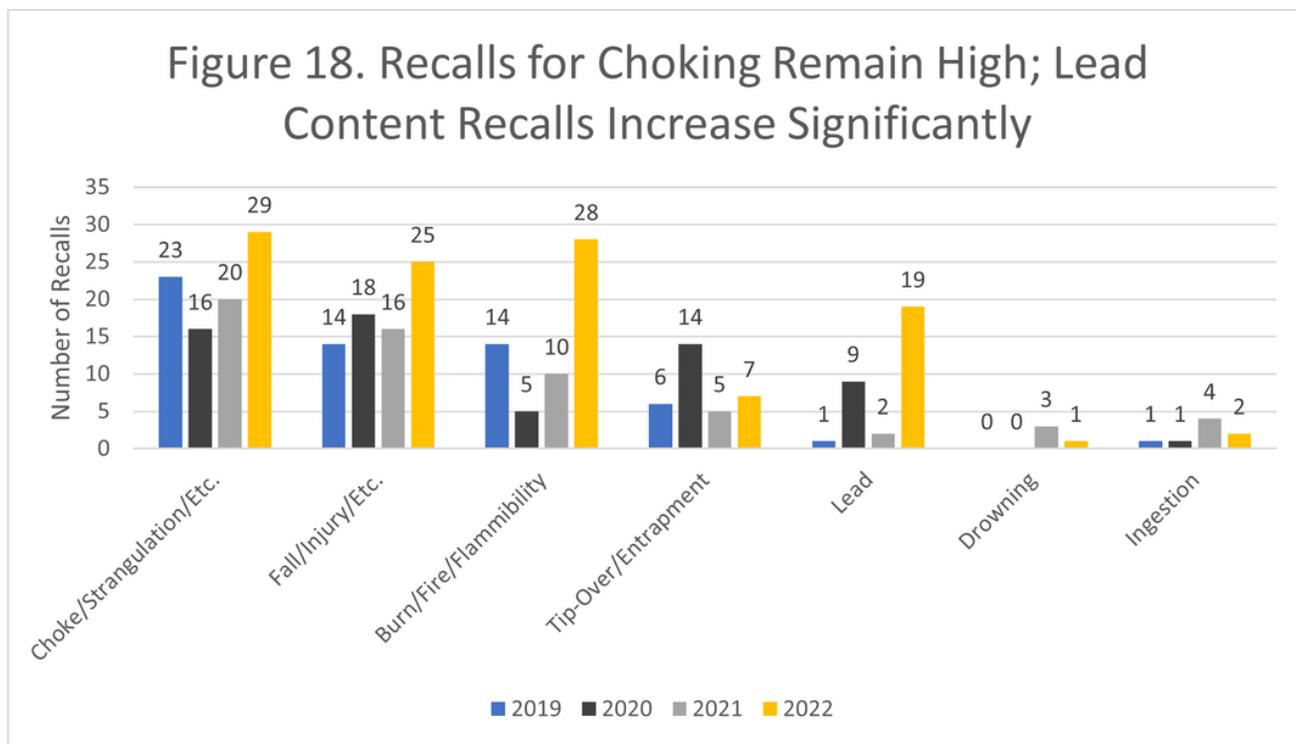

Figure 16. Mockingbird Single-to-Double Strollers

Figure 17. Nursery Products had the Greatest Number of Units Recalled

Recalls by Hazard

Choking and strangulation hazard were the top hazard category with 29 recalls, while burn and flammability hazard followed closely with 28 recalls. There were 19 recalls due to lead content hazards, which was significantly higher than previous years.

Lead Content Recalls

Nineteen children’s products were recalled due to lead content. This is the highest number of recalls for lead in the last 10 years, followed by nine recalls in 2020. The two products that had the most units recalled were a plush toy, 6" Aflac Plush Promotional Ducks (600,000 units), and a children's clothing set sold by The Bentex Group (87,000 units). The Consumer Product Safety Improvement Act, passed in 2008, included provisions addressing lead, third-party testing, and certification, among other things. Eight of the 19 products with high levels of were toys, and five were clothing items.

Figure 19. Number of Lead Content Recalls Highest in Past Decade

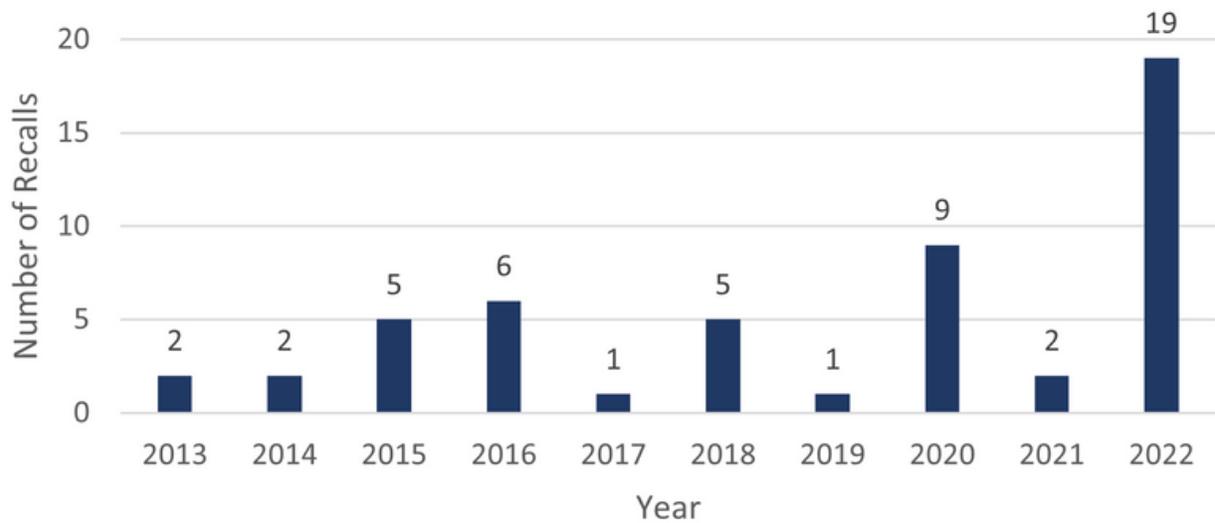

Figure 20. 6" Aflac Plush Promotional Ducks

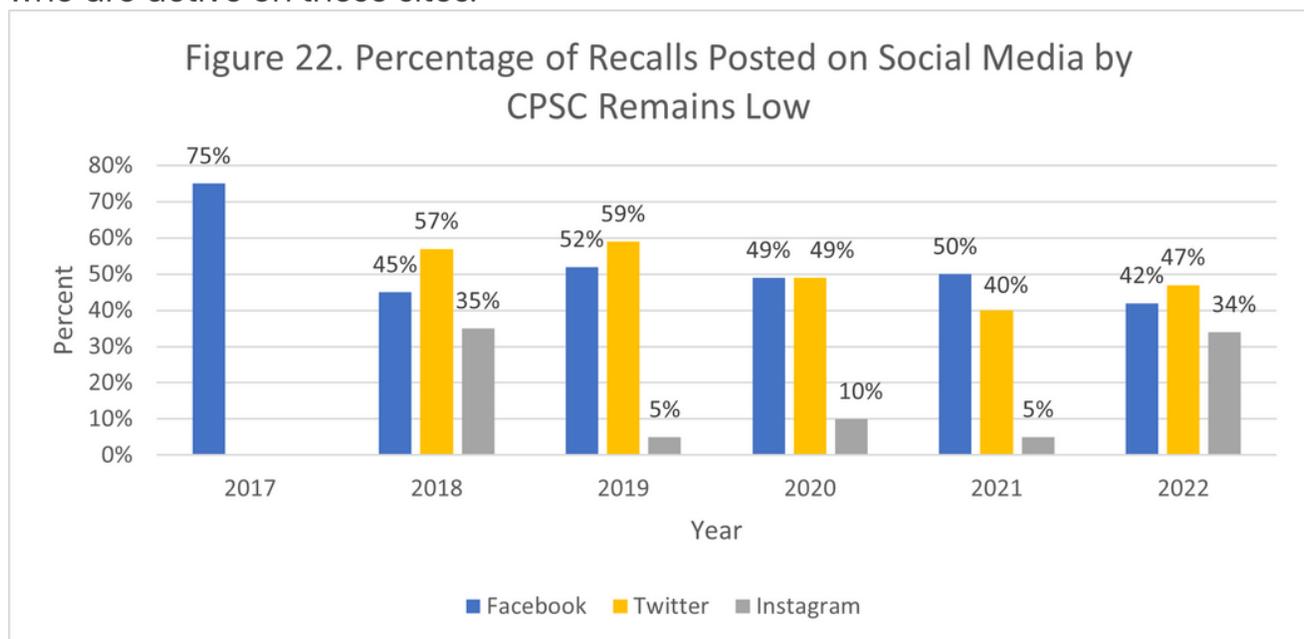

Figure 21. Children's Clothing Set by The Bentex Group

CPSC Improves Instagram Usage, But Can Still Improve Social Media Usage

Social media is a powerful tool for disseminating information and can be more effectively used in communicating children’s product recalls than other avenues. Since 2017, KID has monitored the percentage of children’s product recalls that the CPSC posted to their social media pages and announcements have remained consistently low. Facebook data has been tracked since 2017 while Instagram and Twitter data has been tracked since 2018. Facebook has seen a relatively consistent percentage of posting over the years hovering around 45-50% of recalls. In 2022, CPSC posted 42% of the children’s products recalled to their Facebook. Twitter usage rose slightly since 2021 when only 40% of children’s products were posted, to 45% in 2022.

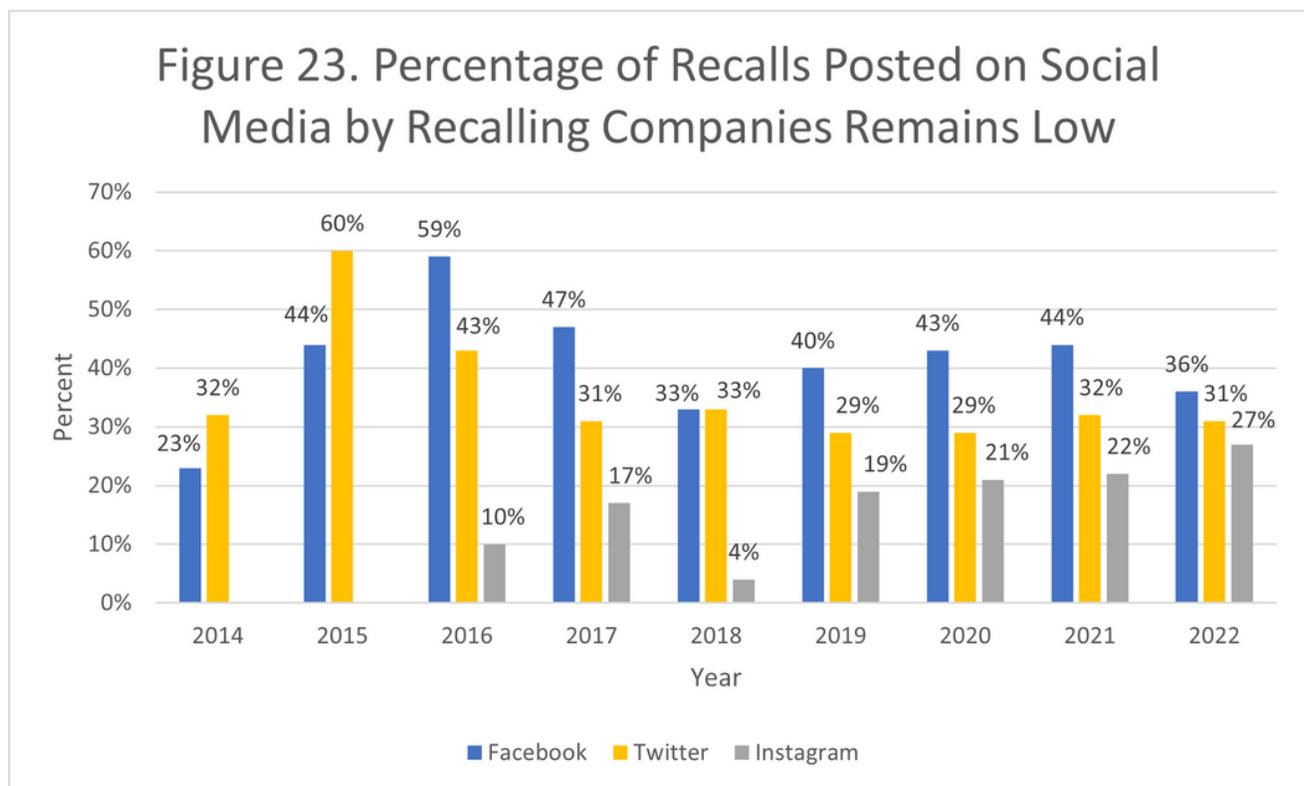

CPSC’s use of Instagram increased significantly as they started to use story highlights to post on their page. They posted 35% of the recalls in the highlight format allowing for the post to stay on their page longer. Previously, the CPSC posted recalls as stories, which are removed after 24 hours. Posting them as story highlights allow followers to see the recall after the initial posting and check back as well.

While improvement in their use of Instagram is important, the CPSC is failing to post all recalls on all their social media platforms. It is important to take advantage of social media to reach parents and caregivers of young children who are active on these sites.

Companies' Use of Social Media to Announce Recalls Remains Low

Since 2014, KID has tracked recalling companies' use of social media to announce recalls. Companies posted 37% of recalls on Facebook, 32% on Twitter, and 28% on Instagram. Social media usage by companies has remained relatively consistent since 2019 and remains low since KID has been tracking posts. Less than half of the recalls have been posted on social media platforms by manufacturers. Recall effectiveness can be improved if recalling companies adequately notify their customers about recalls.

CPSC Released Warnings about Hazardous Products Not Recalled

In 2022, the CPSC released warnings to consumers regarding five hazardous children’s products. Unilateral notifications are public warnings of a hazard after engaging with the firm in an advance notice process, with an exception for a public announcement of a regulatory violation. The CPSC can issue unilateral notifications when firms are not responsive or out of business, if firms are unwilling to take corrective action or if a proposed remedy is insufficient.

The CPSC issued a unilateral notification for BabyRescue Rapid Evacuation Devices, sold by Safety International LLC, for a fall hazard. Safety International agreed to stop the sale of the product in December 2021, but the firm did not agree to an acceptable recall, so the CPSC released the notification in May 2022.

The CPSC and the manufacturers warned consumers about the Fisher-Price Infant-to-Toddler and Newborn-to-Toddler Rockers after 13 reported deaths and the Kids2 Bright Starts and Baby Einstein Rockers after one death. In June 2022, the firms and the CPSC informed consumers that the rockers should never be used for sleep and infants should never be unsupervised or unrestrained in them.

In November, the CPSC issued a notice of violation to DockATot and warned consumers against using the DockATot Deluxe Plus Dock. The product violated the Infant Sleep Products Rule that went into effect in 2022, but the company continued to import and sell the product. This warning was a public announcement that the product does not comply with safety standards and should not be used.

Figure 24. BabyRescue Rapid Evacuation Device

Figure 25. Fisher-Price Infant-to-Toddler Rocker and Fisher-Price Newborn-to-Toddler Rocker

Figure 26. DockATot Deluxe Plus Dock

Recall Effectiveness

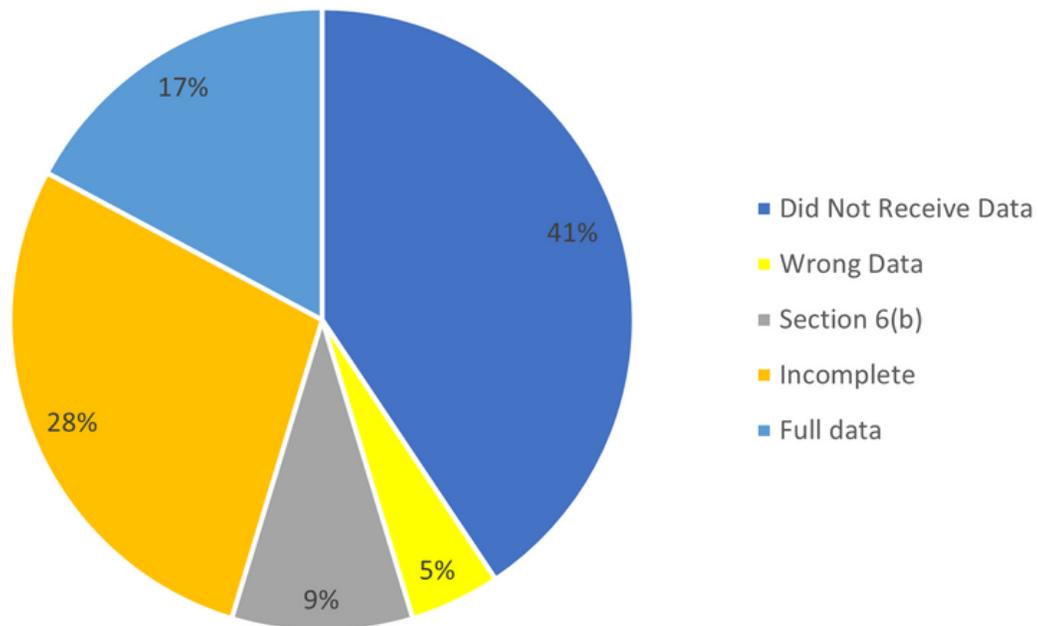

After a product is recalled, CPSC protocol dictates that manufacturers submit Corrective Action Plan (CAP) Monthly Progress Reports to track the recall process. For the year 2021, there were 62 total children's product recalls, and KID submitted Freedom of Information Act (FOIA) requests to the CPSC to receive the data that these companies have submitted. However, of the 64 requests (two had to be resubmitted), KID only received 11 reports with nine or more months of data. Within the 11 reports, most companies' rate of correction remained low with an average of 25% corrected products. The Janod Children's Shaving Kits had the highest corrections rate at 66% while the Luyuan Youth All-Terrain Vehicles (ATVs) had the lowest number of corrections at only 1% corrected.

Furthermore, some of the data provided in the reports were illegible or filled out incorrectly. For example, the CAP data for ABUS MountZ Youth Helmets indicated that a cumulative 625 products were corrected in their first monthly report. However, the next month the cumulative number went down to 451 products. This inconsistent reporting continued throughout the nine months they reported. Many companies showed inconsistent reporting and did not seem to have uniform rules as to how to report the data or how to categorize their recall numbers. This makes it difficult to analyze the recall effectiveness even when data was available.

Table 3: Units Corrected in Full Reports Remain Low

Product	Total number of units Recalled	Number of Units Corrected	Corrected Percentage	Recalled Units with Customers	Number of Units with Customers Corrected	Percent of Units with Consumer Corrected
Noble House Home Furnishings Chests, Cabinets and Dressers	939	137	14%	939	137	14%
Arizona Jean Co. "Lilac Smoke" Girls Midweight Puffer Jackets	3,700	206	6%	3,533	39	1%
Cat & Jack Baby Heart Ears Rompers	44,361	15,173	34%	29,994	806	3%
Baby Ruffle Rompers	3,238	1,961	61%	1,505	228	15%
Junction Tall Chests and Low Dressers	11,042	516	5%	11,042	516	5%
Cabina Bunk Beds	195	11	6%	195	11	6%
Wild Republic Slap Watches	462,956	114,226	25%	348,730	0	0%
Letters to Santa Mailbox	174,250	106,133	61%	70,134	2,017	3%

Figure 27. Status of Data for CAP Reports from 2021 Recalls

Twenty-one additional reports were provided but contained partial information or were illegible. The rest of the 32 requests were either denied due to FOIA exemption (6) or have not been addressed (26). The CPSC has made plans to enhance its CAP Reporting and to monitor the recall process. The agency has introduced technical assistance to online submissions of the CAP data and has been monitoring the submission to notify companies of delayed reports. This monitoring may lead to further actions if the recall process is going well, or if the process is stagnating. CPSC has also made plans to publish this data on the CPSC website to the public. These changes are necessary as companies should be held responsible to accurately report the status of their recalls.

Conclusion and Recommendations

Recalls are the most direct way of warning consumers about unsafe products and removing them from the market and homes. This report shows that while CPSC is making progress in recalling more dangerous products, more must be done to make the recalls effective in removing products from homes. Also, more must be done by companies and the CPSC to use all tools in their arsenal to get recalled products out of homes – especially using social media. The difficulty in assessing the effectiveness of recalls means that many dangerous recalled products remain in homes and childcare facilities and can still cause injury or death. If the CPSC is undertaking steps to improve its CAP system, that can mean future recalls are better monitored. The CPSC’s use of unilateral notifications is a powerful tool to warn consumers about hazardous products when they have not yet been recalled.

KID recommends the following:

- Recalling companies must use all tools at their disposal to retrieve recalled products. This includes social media for every recall, and other measures such as direct notification of consumers and marketing recalls to the same extent as they market products.
- Recalling companies should work with retailers, marketers, consumer groups and state and local governments to spread information about the recall more widely and to reach more consumers.
- Online platforms should strengthen efforts to ensure all products sold on their sites are safe, meet any required standards and adequately warn consumers about product hazards.
- Product designers and manufacturers should create safe products that don’t injure children. Resources such as the KID Design Safety Toolkit, CPSC’s Small Business Ombudsman and services of associations such as the Juvenile Product Manufacturers Association and The Toy Association and many others are accessible to assist in this.
- The CPSC should continue to strengthen Corrective Action Plans and recall tracking to make recall efforts more robust.
- The CPSC should strengthen enforcement for online platforms and third-party sellers that are selling dangerous products online.

- The CPSC should continue to issue unilateral notifications to consumers about a hazardous product when the company does not agree to a recall and should do everything in its power to get unsafe products recalled.
- The CPSC should translate all children's product recalls into Spanish, with a priority on those involving injuries or deaths.
- The CPSC should improve its capabilities to provide accurate recall effectiveness data both through the FOIA process and by making recall effectiveness metrics public.
- Policymakers should provide adequate funding for the CPSC to fulfill its mission.
- Parents and caregivers should report product incidents to the CPSC at [SaferProducts.gov](https://www.saferproducts.gov).
- Parents and caregivers must be proactive to keep up with recalls. They can subscribe to KID's newsletter to receive a monthly recall digest at www.kidsindanger.org.

Methodology

A children's product is defined as any product designed or intended for the care of or use by children under age 14. KID has expanded this definition to include other products that pose risks specifically to children such as window blinds (none recalled this year) and dressers. Children's products were further categorized for this report by the type of product (clothing, furniture, kitchenware, nursery, outdoor & sports, and toys). More details on the products can be found in Appendix A. Since 2014, KID has monitored the social media usage by manufacturers to report recalled products. When a product is recalled, KID checks if the recalling company has a Facebook, Twitter and/or Instagram page. If the manufacturer has any of these three social media platforms, it is noted for each applicable platform whether a recalled item was posted. KID has also monitored the usage of social media by the CPSC since 2017 when the CPSC joined Facebook. The CPSC's Twitter and Instagram pages have been monitored for recalled children's product posts since 2018. KID monitors Instagram posts, not stories. KID obtained all recall information for this report from press releases issued jointly by product manufacturers and the CPSC. Press releases outline the incidents, injuries, deaths, and failures caused by the product prior to the date of recall. All numbers, facts, and figures contained in this report originated in these press releases. Recall effectiveness data was obtained by submitting FOIA requests to the CPSC for monthly progress reports. Only children's products under the jurisdiction of the CPSC were considered. This excludes car seats and booster seats regulated by the National Highway Traffic Safety Administration. However, the CPSC does have oversight of car seats that also function as infant carriers.
